PROFILE

Over 9 years at EPA.Digital, a Mexican performance-marketing agency of about 200 people. I started in account management, moved through analytics and CRO, became a data manager, and since 2024 I have built the AI systems the account teams use (MCP servers, RAG, agents and dashboards on Google Cloud). I lead one AI developer.

EXPERIENCE

EPA.Digital · Mexico City — Jul 2017 – present

AI & Automation Lead — Sep 2024 – present

- **Osaka, media MCP server.** Agentic assistant that queries Meta, Google Ads, GA4, TikTok, Bing and DV360 for account teams: 47 people with access, most of them through MCP (admin dashboard, Oct 2026). I built the first version alone in 2025 (FastMCP on BigQuery); today I am technical co-owner of the production version (TypeScript, Hono, Cloud Run, OAuth for Claude.ai) and led its quality review of 484 real conversations.
- **Prompt Library.** Lead author of the agency's prompt and automation repository (Next.js, Firestore, Cloud Run), opened to all 170 EPA employees at launch; runs at 0 USD per month.
- **Einstein.** Product owner of the agency's RAG knowledge base with an MCP connector (FastAPI, React, Qdrant, Claude on Vertex AI): architecture, permissions and roadmap.
- **Client dashboards.** SKU dashboards and ETL with CI/CD to Cloud Run for several EPA clients; for one of them, daily analysis went from a full day to 30 minutes.
- **Hopper.** Replaced a 993-row Excel QA matrix with a flow that checks dashboards against real data and opens GitHub issues.
- **Claude Code plugins.** Built the agency's plugin marketplace: a fixed stack for dashboards, BigQuery conventions, design system, Cloud Run deployment and security guardrails.
- **Training.** Internal courses on prompting, Anthropic's AI Fluency and dashboards with Claude Code; GEO course at Universidad Panamericana.

Data Manager — Sep 2020 – Sep 2024

- Designed the agency's central media database on BigQuery and helped build an in-house Supermetrics replacement (Apps Script and Cloud Functions), the origin of the data platform the agency uses today.
- Client analysis in R and Quarto, and Google Ads automation with human approval in Sheets for keywords and search terms.

CRO & Data Analytics Lead — Jan 2019 – Sep 2020

- Created the agency's CRO program with a team of three (UX, development and analysis) and worked with the Marketing Director on KPIs and automated reporting in R.

Digital Marketing Analyst · Account Executive — Jul 2017 – Dec 2018

- Campaigns on Google, Facebook and Bing; analysis with Google Analytics and R; Google Ads scripts.

PERSONAL PROJECTS · 2026

Iterum (travel), **Domi** (apartment hunting in Mexico City) and **Vocatio** (job search): three apps run by teams of agents, deployed on Cloud Run and built on **Fundamentum**, my shared Python chassis with ADK, Gemini and Claude on Vertex AI, cost tracking in BigQuery, guardrails and evals. Case studies at josecarloscorona.dev.

SKILLS

AI: MCP, Claude and OpenAI SDKs, Gemini, Vertex AI, Google ADK, RAG, LangGraph, evals, Claude Code

Data: SQL, BigQuery, ETL, Python, R, Firestore, Looker Studio

Development and cloud: TypeScript, Next.js, React, FastAPI, Cloud Run, Cloud Build, Terraform

Media: GA4, Google Ads, Meta, TikTok, Bing, DV360

EDUCATION AND LANGUAGES

B.A. in Business Administration, UNAM (National Autonomous University of Mexico), graduated 2016

Certifications: Google Launching into ML and Prompt Design in Vertex AI (2024); DataCamp Data Analyst with Python

Languages: Spanish (native); English (upper intermediate, B2)
